

DISCUS

Pepijn Tyvaert

SERAX

"As an object, I find a clothes rack much more interesting than a closet."

"DISCUS is a rack equipped with discs on which users can leave their daily trinkets. You know, those little things for which you never really find a good place."

If well begun is half done, then a bright future lies ahead for Pepijn Tyvaert. After all, Tyvaert has not even graduated yet, and has already won the design competition that Serax organised in collaboration with the Belgian magazine Weekend Knack. He achieved this with DISCUS, a multifunctional steel clothes rack. This rack is equipped with discs on which users can leave their daily trinkets: from a bunch of keys and sunglasses to scarves, belts, watches and jewellery. You know, those little things for which you never really find a good place. "As an object, I find a clothes rack much more interesting than a closet," says Tyvaert, who did not have a specific location in mind for the DISCUS when he designed it. "I can see it working both in a student room and in a loft, but just as well in a hotel room or a restaurant."

PEPIJN TYVAERT

Twenty-year-old Pepijn Tyvaert moved to the centre of Bruges about six years ago. That location prompted him to experiment with photography and from there he developed an interest in architecture. All this creativity was then channelled into an Interior Design course at the KASK in Ghent. The DISCUS clothes rack was the first design for which Tyvaert made a prototype. His teachers were the ones who encouraged him to take part in the design competition set by Serax and the Belgian magazine Weekend Knack. And it's a good thing they did.
